

◀ GOOD PRACTICE INFORMATION ▶

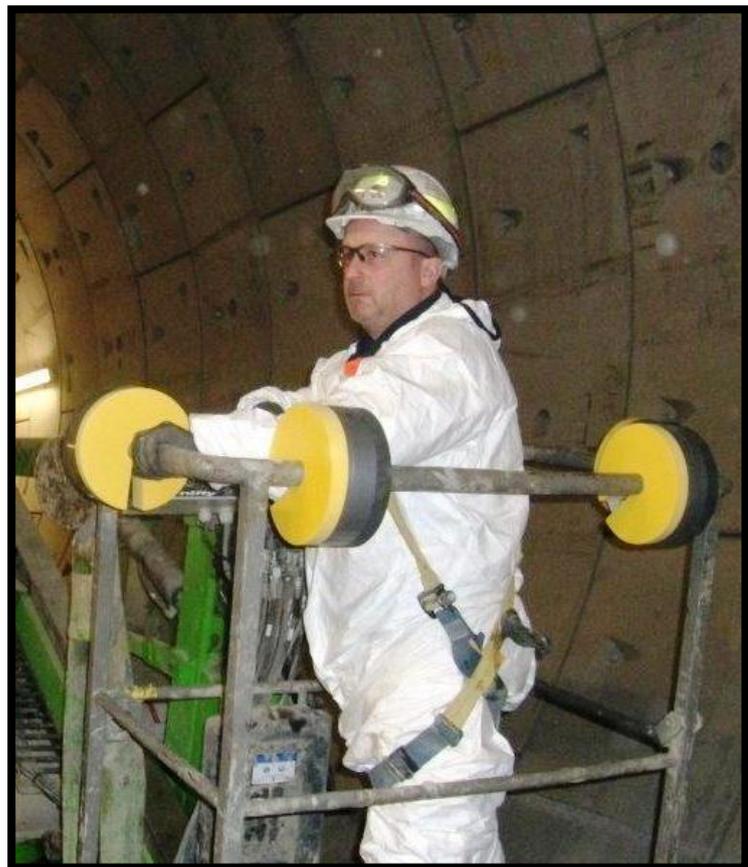

No-Nocs Protection

What is it?

BFK at C435 are trialling the No-Nocs™ protection system which is proving its worth within the SCL work areas. The robust high density flame retardant foam units protect operator's hands which naturally go to grab handrails.

Initially designed to prevent / reduce the damage to equipment and finishes, this simple device is now made with the primary intent of protection from crush injuries.

What are the benefits?

- Helps prevent damage to equipment / finishes
- Simple and quick to fit and easily moved from equipment to equipment
- Highlights the edges of equipment
- Can be applied to equipment in the tunnel environment
