Van Smart Training

New Training - Free to Crossrail Contractors:

Van Smart is a new assessed and approved driver training and development programme, for companies who operate fleets of vans up to 3.5 tonne GVW. Developed by Transport for London (TfL) in conjunction with Crossrail, this new initiative is part of a range of training, guidance and toolkits to improve van safety on London's roads.

Van Smart consists of several products that improve van drivers awareness of, and behaviour towards, managing work related road risks. This leads to improving driving standards, being more aware of and keeping vulnerable road users safe, whilst reducing operating costs.

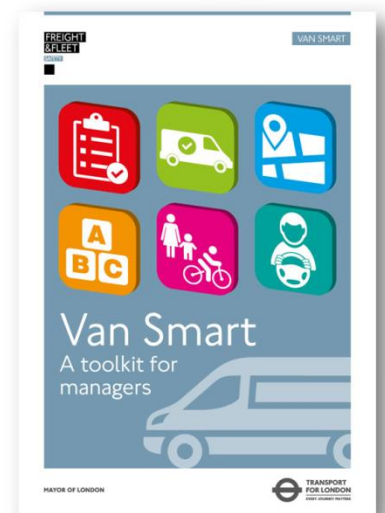

It includes:

- Driver competency framework
- Van fleet managers guide and toolkit
- Toolbox talks and workplace poster set
- Driver handbook
- Classroom based theory session – half day
- On-cycle practical training session – half day
- Online e-learning module

This course was presented to SHELТ (Safety & Health Leadership Team) in January to ensure they are aware of it.
